DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in the pending application.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Authorization for this examiner's amendment was given in a telephone interview with David Muzilla on 10/25/07. The substance of the interview can be found on the attached interview summary form.

The application has been amended as follows:

Please amend the specification as follows:

[0014] In accordance with the invention that object is attained by an apparatus for image data computation and for synchronous image data output having the features of claim 1. Further independent and respectively separately patentable aspects of the concept of the invention constitute a graphics master module ~~having the features of claim 11~~, a graphics client module ~~having the features of claim 13~~, an image switching module ~~having the features of claim 15~~, an arrangement for producing and simultaneously reproducing at least two partial light images which can be perceived together as a light image having a three-dimensional effect, ~~with the features of claim 17~~, an arrangement for producing and reproducing in succession in respect of time at least two partial light images which can be perceived together as a light image having a

Art Unit: 2628

three-dimensional effect, ~~having the features of claim 24~~, and a method of synchronously computing and outputting image data of at least two partial images of an image, ~~having the features of claim 35~~.

Allowable Subject Matter

3. Claims 1-10 and 39-46 are allowed.

The following is an examiner's statement of reasons for allowance:

In reference to claim 1, the prior art of record does not explicitly disclose the combination of limitations of the virtual reality computing apparatus of the claim including, the graphics master unit adapted to re-compute and store object and/or event parameters of a first scene graphics data file according to the code of a virtual reality modeling language, sending the newly computed object and scene graphics data file to at least two graphics client units, these client units each overwriting previous versions of the scene graphics data file with newly computed versions of the file such that all partial images of the scene when synchronously displayed together allow a three-dimensional perception of a three-dimensional scene by a human viewer along with sending a message back to the graphics master unit signaling the conclusion of the image computation respectively and outputting the respective computed partial images, in combination with the further limitations of claim 1.

In reference to claims 2-10 and 39-46, claims 2-10 and 39-46 depend upon allowable claim 1 and are therefore also deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
